$$A_{\text{HCl}} = 0.001 \text{ mol} \times 36.5 \text{ g/mol} = 0.0365 \text{ g}$$

Figure 1 is a scatter plot showing the relationship between the ratio of the number of species to the number of genera (C/S) on the x-axis and the ratio of the number of species to the number of families (C/F) on the y-axis. The x-axis ranges from 0 to 1.0, and the y-axis ranges from 0 to 1.0. A dashed line represents the 1:1 relationship. Data points are labeled with letters A through S. Most points are clustered below the 1:1 line, indicating that the number of species is generally greater than the number of genera. Points A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, and S are plotted. Point A is at approximately (0.1, 0.1). Point B is at approximately (0.2, 0.2). Point C is at approximately (0.3, 0.3). Point D is at approximately (0.4, 0.4). Point E is at approximately (0.5, 0.5). Point F is at approximately (0.6, 0.6). Point G is at approximately (0.7, 0.7). Point H is at approximately (0.8, 0.8). Point I is at approximately (0.9, 0.9). Point J is at approximately (0.1, 0.2). Point K is at approximately (0.2, 0.3). Point L is at approximately (0.3, 0.4). Point M is at approximately (0.4, 0.5). Point N is at approximately (0.5, 0.6). Point O is at approximately (0.6, 0.7). Point P is at approximately (0.7, 0.8). Point Q is at approximately (0.8, 0.9). Point R is at approximately (0.9, 0.1). Point S is at approximately (0.1, 0.9).
